## JarChem Innovative Solutions

Masks of all types have recently become a trendy and practical addition to the product portfolios of many skincare, cosmetics, and spa companies. To provide new textures and comprehensive customized solutions to the US Market, JarChem's Custom Manufacturing and Tolling Services has partnered up with Technature, a cosmetic private label company, to provide a full turn-key service. This partnership allows JarChem to service custom mask products from the very first step of R&D to the very end with filling & packaging. Explore new textures, formulations, and packaging options to add finished masks to your line of products.

Created in 1996, Technature is a leader of forward-thinking cosmetic concepts, formulations, and peel-off masks as well as unique powder formulations. With two sites dedicated to cosmetic production, an expert team of R&D and Regulator Specialists, and extensive packaging & labeling equipment, Technature is able to personalize products to your needs and bring your specific concepts to life.

## Services & Capabilities

### R&D INNOVATION

Dedicated R&D team of experienced individuals are always creating new technologies for the mask market. With strong creativity, knowledge of industry trends, perfect understanding of industry regulations and raw materials, Technature's team is ready to create a variety of original and innovative formulations!

- 2 to 3 innovation a year
- 4 new validated formulas per week

### FORMULATING

Experienced in peel-off masks and cosmetic powder manufacturing, Technature is always combining creative concepts and interesting materials to formulate new textures, effects, and results. Each project will be managed by a dedicated technician who customizes to your needs and market.

ECOCERT &  
COSMOS  
APPROVED

### MANUFACTURING

Technature has two sites for manufacturing, each specializing in different technologies. The Dirinon site specializes in cosmetic powders: from 20kg to 5 tons/batch and the Relecq-Kerhuon site specializes in skin cares from 30kg to 1 ton/batch.

GMP CERTIFICATION  
ISO 22716

9 POWDER MIXERS:  
CAPABILITIES BETWEEN 5KG AND 5  
TON/LOT

5 VACUUM REACTORS:  
150L, 300L, 600L, 1000L, 3000L

### PACKAGING & LABELING

Technature provides various options for packaging and printing support. Existing packaging types include sachets, tubes, airless bottles, bottles, jars, buckets, folding cartons, sample tubes, and more. Thermal printing, rotogravure or flexo sachets, silkscreens, labeling and more are also services provided. Ask us about the types of packing lines that Technature has.

## Mask Range

### BIOCELLULOSE MASKS:

Made out of natural fermentation of coconut water, bio-cellulose masks provide exceptional moisturizing properties and creates a “second skin” like effect with its unique membrane texture.

### HYDROGEL MASKS:

Made from carrageenans (natural polymers) forming a fresh filmogenic gel, hydrogel masks have a unique gel texture that spreads and seals incorporated ingredients onto all facial shapes perfectly.

### LEAF MASKS®:

This type of mask material made from green tea and other plant extracts. These “Leaf Masks” are created from plant components, manufactured without altering their natural properties to retain their innate benefits to the skin. This type of mask is supplied dried; to use, simply rehydrate & soak with lotion, serum or water and apply to the skin.

### PEEL OFF MASKS:

Made out of ultra-fine powder based on alginate, a natural substance extracted from brown seaweed. Once combined with water, it creates a smooth paste to be applied to the skin or body. After 15 minutes of dry time, the mask is peeled off in one whole piece. Usually provides a natural refreshing sensation and skin-tightening effect.

### SHAKER MASKS®:

Using specific cosmetic powder cocktails, Shaker Masks® provide instantaneous masks to be rinsed or peeled off after dry down. These masks are made fresh from mixing powder with water and physical shaking in specific containers. Four textures are available: Smoussy®, Creamy, Cristally, and Peel-off.

#### BUBBLE MASKS:

Technature's bubble masks have a light airy texture that breathes oxygen into the skin. In direct contact with the skin, the gel formula of the mask turns into a micro-bubble foam for a soft and luxurious application. This mask helps remove impurities, refine the skin, and protects it from pollution and external aggressions.

#### CREAM MASKS:

Technature cream masks are ready to use formulas that provide a variety of benefits ranging from hydration, anti-aging, purifying, to radiance enhancement and more. Masks have a creamy texture that can sink into the skin comfortably, leaving soft and supple skin results.

#### POWDER MASKS

With expertise in cosmetic powders & mixing processes, Technature provides unique cosmetic powders that transform into masks with a variety of functions. Powder technologies that are already existing include thermic masks using gypsum base & heating effects, body masks that are rinse off, dry shampoos, cleaning powders and more.

#### SHEET MASKS:

Technature provides a variety of trendy and essential face masks that are extremely popular in Asian countries. Masks are available in customizable cut-out shapes and production is efficient with automatic manufacturing and packing lines. Various formats and textures are available for face, hands, feet, eyes, and more. Black colored masks is also an option.
